

MatchIndeed Third-Party Integrations Report

Date verified: April 27, 2026

Website reviewed: <https://matchindeed.com>

Purpose

This report lists the third-party platforms, API services, and external providers currently connected to the MatchIndeed website or implemented in the codebase for website operations.

This report does not expose any secret values. It lists:

- provider name
- service purpose
- provider website or API URL
- configuration status
- the environment variable names used by the app

Production-Confirmed Active Integrations

These services were confirmed as configured on the live production website as of April 27, 2026.

ImageKit	Image CDN and optimization option	https://imagekit.io	Implemented in env template, not production-confirmed

Key Client Notes

- The website currently depends heavily on Supabase, Stripe, Zoom, Resend, OneSignal, Google Maps, TheHive.ai, OpenAI, and Customer.io.
- Stripe is clearly active for payments, but `STRIPE_WEBHOOK_SECRET` was not confirmed in the reviewed production `.env` files. This should be reviewed carefully because subscription or payment finalization can depend on a correctly configured webhook.
- Zoho support exists in the codebase, but the production setup looked incomplete during this review.

- Several security and analytics services exist in code but do not appear fully enabled in the reviewed production environment.

Source Verification Basis

This report was compiled from:

- the active Next.js application code
- environment variable references in source files
- local project environment files
- a direct production server environment review performed on April 27, 2026
